Software Quality Assurance Engineer

Description

As Quality Engineer, you will be a member of an agile team environment and you will learn, practice, and drive the software quality best practices we use that help make our software the industry leader. Coordination, planning, execution, automation scripting and driving root cause and corrective actions are only a few of the many activities your work will entail.

Responsibilities

- Serve as subject matter expert for complex automated testing application design and development issues.
- Participate as an expert in software redesign process assessing software development projects for quality assurance factors affecting functional requirements and design specifications.
- Create automation testing strategies, leveraging knowledge of industry-standard software development principles.
- Review testing documentation, develop testing standards, define criteria for testing, analyze test results, and present results to developers.
- Integrate test code into the CI/CD pipeline, review and monitor test results, and work with developers to fix and resolve identified issues.
- Provide input to systems and applications developers on testing automation procedures and requirements, schedules, or potential problems.
- Perform maintenance and upgrades to existing test environments.
- Collaborate with product owners, development leads and other stakeholders to understand product specifics and create corresponding test strategies.
- Coaching and mentoring cross-functional teams in automated testing and CI/CD.

Qualifications

We care more about your attitude and aptitude than the specific tools and technologies you have used in the past. You need to have a strong passion for software quality and must take pride in the software the team is producing.

In addition to this, our ideal candidate will meet the following criteria:

- 2+ years of experience in software development or test engineering role with a broad understanding of the software development lifecycle (SDLC).
- Able to code comfortably in C#, JavaScript, and other modern programming languages.
- Strong understanding of modern web and mobile architecture, specifically
