Java Developer

Description

SailPoint is seeking a Backend Software Engineer to work on its SaaS Platform team. We are looking for well-rounded backend engineers who are passionate about building and delivering reliable, scalable microservices and infrastructure for SaaS products.

The SaaS platform team owns a variety of functional areas within our engineering organization.

Some of the areas included in our focus include:

- Shared services including authentication, authorization, notifications and an API Gateway
- Platform Level Microservices
- Tools to provide visibility into health of the SaaS platform
- Improvements to the development stack and development experience.
- Proving out new technologies to be adopted into the stack
- Ensuring that our platform components are scalable and performant.

Responsibilities

Responsibilities

- Deliver efficient, maintainable, robust Java based microservices.
- Produce designs and rough estimates, and implement features based on product requirements.
- Collaborate with peers on designs, code reviews, and testing.
- Produce unit and end-to-end tests to improve code quality and maximize code coverage for new and existing features.

Qualifications

- Strong Java experience
- A desire to peer review others code and have yours reviewed
- You understand the importance of shipping code early and often
- The love of collaborating with your co-workers to arrive at simple, elegant solutions to problems
- BA/BS preferred in Computer Science or equivalent work experience
