Sr. Java Developer

Description

Employment Type

Full-time

Industry

E-Commerce

Working Hours

8:00 a.m to 4:30 p.m

Date posted

November 22, 2018

Are you an senior engineer who is energized by designing and implementing elegant code that is focused on solving business problems? Who believes that the job is not done until end-users are successfully using your solution to do their job more effectively? Do you enjoy variety and the freedom to work on many different areas of a product? Do you continually seek to develop your knowledge and skills, learning tools and technologies that help you master your profession?

If so, we are looking for you! As a Senior Java Developer with us, you will work within a small agile team of likeminded and talented engineers and product professionals in a focused, no bureaucracy environment, striving to push the limits of our capabilities while delivering tremendous value to our customers.

Responsibilities

Work with the product owner to evolve and solidify the technical and experience design for new features and modules for our product.

Design for extensible and scalable multi-threaded solutions, optimizing for resource utilization, performance, and supportability.

Code, test, and optimize designs across the system, subsystems and micro-services.

Refactor legacy code to simplify the system and create highly supportable / maintainable code.

Work with customer support to troubleshoot and resolve product and platform issues.

Monitor evolving Java Framework, SQL and noSQL database trends and technologies for possible adoption.

Qualifications

6+ years of experience in software engineering building highly scalable systems.

5+ years of experience working with Java development with advanced knowledge of Spring framework.

Extensive experience developing multi-threaded Java based services.

Extensive database experience, including database design, implementation, and optimization with SQL and NoSQL (Cassandra) databases
Solid understanding of data structures and algorithm fundamentals.
Solid understanding of APIs using standards like REST, JSON, or XML.
Experience working across the full technical stack of a SaaS product.
Experience with Linux and Windows Operating Systems and Servers.
